Wednesday Challenge Form

Group Members: Half The Class, Me

Problem Statement: Each team was to attempt to move a marble into a bag through the use of a concave mechanism. No student is allowed to move with the marble in their possession. The marble must always move forward.

Approach: We tried to move it fast and precisely. It didn't work out so well though.

Solution: Our team lost to the other team. The other team moved the ball with a slow velocity eastward. We should've taken more time to set up our line and move the ball slower.

Lessons Learned: Working together is important when participating in a team-based exercise.
