Wednesday Challenge Form

Group Members: Nicolas, Shaunt, Leo

Problem Statement: Students are to create a better version of last Wednesday Challenge's winning design—a spinner—with the tools provided by the teachers and veterans.

Approach: My group made our spinner out of a balloon, a straw, and a piece of paper in the shape of a spinner. We felt that this process would be the cheapest and easiest way of manufacturing spinners.

Solution: Garen's group won the challenge. They had the best design and presented their idea well. My group should've come up with a more imaginative and non-simplistic idea.

Lessons Learned: Brainstorm more than one idea for completing a challenge.
