

Date:

Wednesday Challenge Form

Group Members: Everybody

Problem Statement: The goal of the challenge is to build a structure according to a CAD that Dr. Neato provided to each student. Students formed pairs and each pair contributed to the construction of the structure on a turn-by-turn basis. One student in the active pair is blind, and the other one guides the blind student. Each pair has 30 seconds total to contribute.

Approach: Lots of clapping and noise to guide the blind students toward what they needed to pick up and where they needed to fit the pieces in; Dialogue to guide the blind students as well.

Solution: We didn't finish construction. We should've planned ahead before we used up our time.

Lessons Learned: Specific instructions are key towards the completion of a challenge.
