

Date:

Wednesday Challenge Form

Group Members: Nicolas, Connor, Zachary

Problem Statement: Students are to make a device with the resources provided by the judges. The device must pick up disease-infested golf balls from inside a paper bag, and then transfer the balls into a separate paper bag. Students cannot touch the balls or the sides of the bag with their hands.

Approach: We used two tongue depressors to try and pick up the balls. It didn't work out well

Solution: Maddie's group won the challenge. My group was disqualified

Lessons Learned: Listening to directions is crucial when fulfilling a task.
