

Date:

Wednesday Challenge Form

Group Members: Nicolas, Arthur, Aaron, Edgar

Problem Statement: The goal of the challenge was to construct a paper airplane. Then, we'd write down the instructions for creating the airplane and swap instructions with another pair. We had to make a paper airplane by following the swapped instructions and then fly those airplanes. The group with the furthest flying airplane wins.

Approach: Alex and I made a glider paper airplane. We then wrote instructions on how to make our airplane. We swapped instructions and made an airplane based off of the swapped instructions.

Solution: The winner of the challenge hasn't been announced. Alex and I definitely lost though.

Lessons Learned: If I were to do this challenge again, I'd take more time in crafting my paper airplane.
